

Upgrade

Microsoft is in the process of making upgrades easier, and have also started to release more frequent updates. A major version is released each year, including monthly updates with new functionalities. Therefore, it is important to have an exact strategy when considering to upgrade. Whether your business does an upgrade every second year, or keeps a current version for 8 – 10 years before upgrading, you need to make sure your business has the solution that is most effective for your specific needs.

At Dynavix, we have a detailed and proven step by step procedure to bring you a solution relevant to your needs.
