

# Dynamics NAV

The image features a dark blue background with a network of glowing blue nodes and lines. On the right side, there is a stylized profile of a human head composed of glowing blue and green particles. A horizontal green band is overlaid across the middle of the image, containing the text "Dynamics NAV" in white.

Microsoft Dynamics NAV 2017 is a global business solution that continues to be intuitive, quick to implement and easy to use, with the power to support your business growth and ambitions.

Microsoft Dynamics NAV is directly linked to Office 365. This means you can easily review, analyse and share data with relevant colleagues in your organisation. It is now effortless to navigate between Dynamics NAV and any Microsoft tools, such as; Outlook, Bookings or Excel.

The improved compatibility enables you to easily create customers, vendors, quotes, and invoices, all without leaving Outlook. There is also improved Word integration, to help you lay out your documents professionally. The seamless experience means that you can save time, increase accuracy, and offer your customers an improved experience.

Getting started is hassle-free when using the Microsoft Dynamics NAV 2017 Power BI Content Pack. Use the sample reports in the content pack and see great examples of what you can do with Power BI, in either a demo or production environment. You can be confident that your data is secure, because you can leverage the existing Power BI security to manage your reports.

## Enhanced user experience

With Dynamics NAV it is possible to achieve even more in your browser-based interface. Enhancements in the financial department allows you to work with ready-to-use financial statements and gain accessible insights into the financial performance of your business. The new default Account Schedules means that no set up is required, making it quick and intuitive to produce the financial reports that you need, and point-in-time reporting means you can view the financial state of your business for any given time.

Not only is the financial experience simplified for your business, but it's also easier for customers to pay your invoices online by using hyperlinks to payment services (such as PayPal). You can continue to make use of optical character recognition (OCR), to help you track the items that you get in. Dynamics NAV 2017 now enables you to extract the lines of an invoice and you can visually verify the information, training the OCR system online, using the Lexmark invoice capture service.

Microsoft Dynamics NAV still continues to streamline your CRM experience and enhance the process of integrating to CRM online. The Dynamics NAV Integration Solution on the CRM side is automatically deployed through the wizard.

## Extensions

Modify your Dynamics NAV system without directly altering the source resources, making it easier to deploy, manage, and upgrade customisations or extensions. Navigate through an install with only a few clicks and easily view extension information, such as name, description, version, publisher, and links. You can also install or uninstall extensions easily using the Extension Management page and quickly choose the extensions you want using the easily-recognisable icons.

## Managing Items

Organise and classify your products in a manner which is most effective and efficient to your needs, performing advanced searches on your catalogue in just a few clicks and displaying only the information you need. You can create custom item attributes and assign an item attribute value, according to your business needs, helping you manage items or create sales documents. When adding your attributes and values to an item, you can see them all in a fact box, on both the card and the list. You can also filter your items based on attribute values, making it more efficient to add items to sales and purchase documents and limiting the list of items to choose from or take action on.

## Cortana Intelligence

Built-in Cortana Intelligence takes advantage of historical data and improves your insights into your predicted sales, helping you manage your stock and respond to your customers. Based on the forecast, the Sales and Inventory extension helps create replenishment requests for vendors, saving you time. You can be confident that you are working with the best predictions, because the system uses different machine learning algorithms and compares the results, returning the predictions with the highest quality.

## PowerApps & Microsoft Flow

Connect to your Dynamics NAV instance and immediately have access to business performance insights into your business. The app is designed specifically for Small and Mid-Sized Business (SMB) owners, managers and executives to provide details about customers, sales and finance. The dashboard and reports are built on top of a fully featured model, allowing you to explore and analyse your data as you need. And automatic refresh ensures you're always seeing the latest data.
