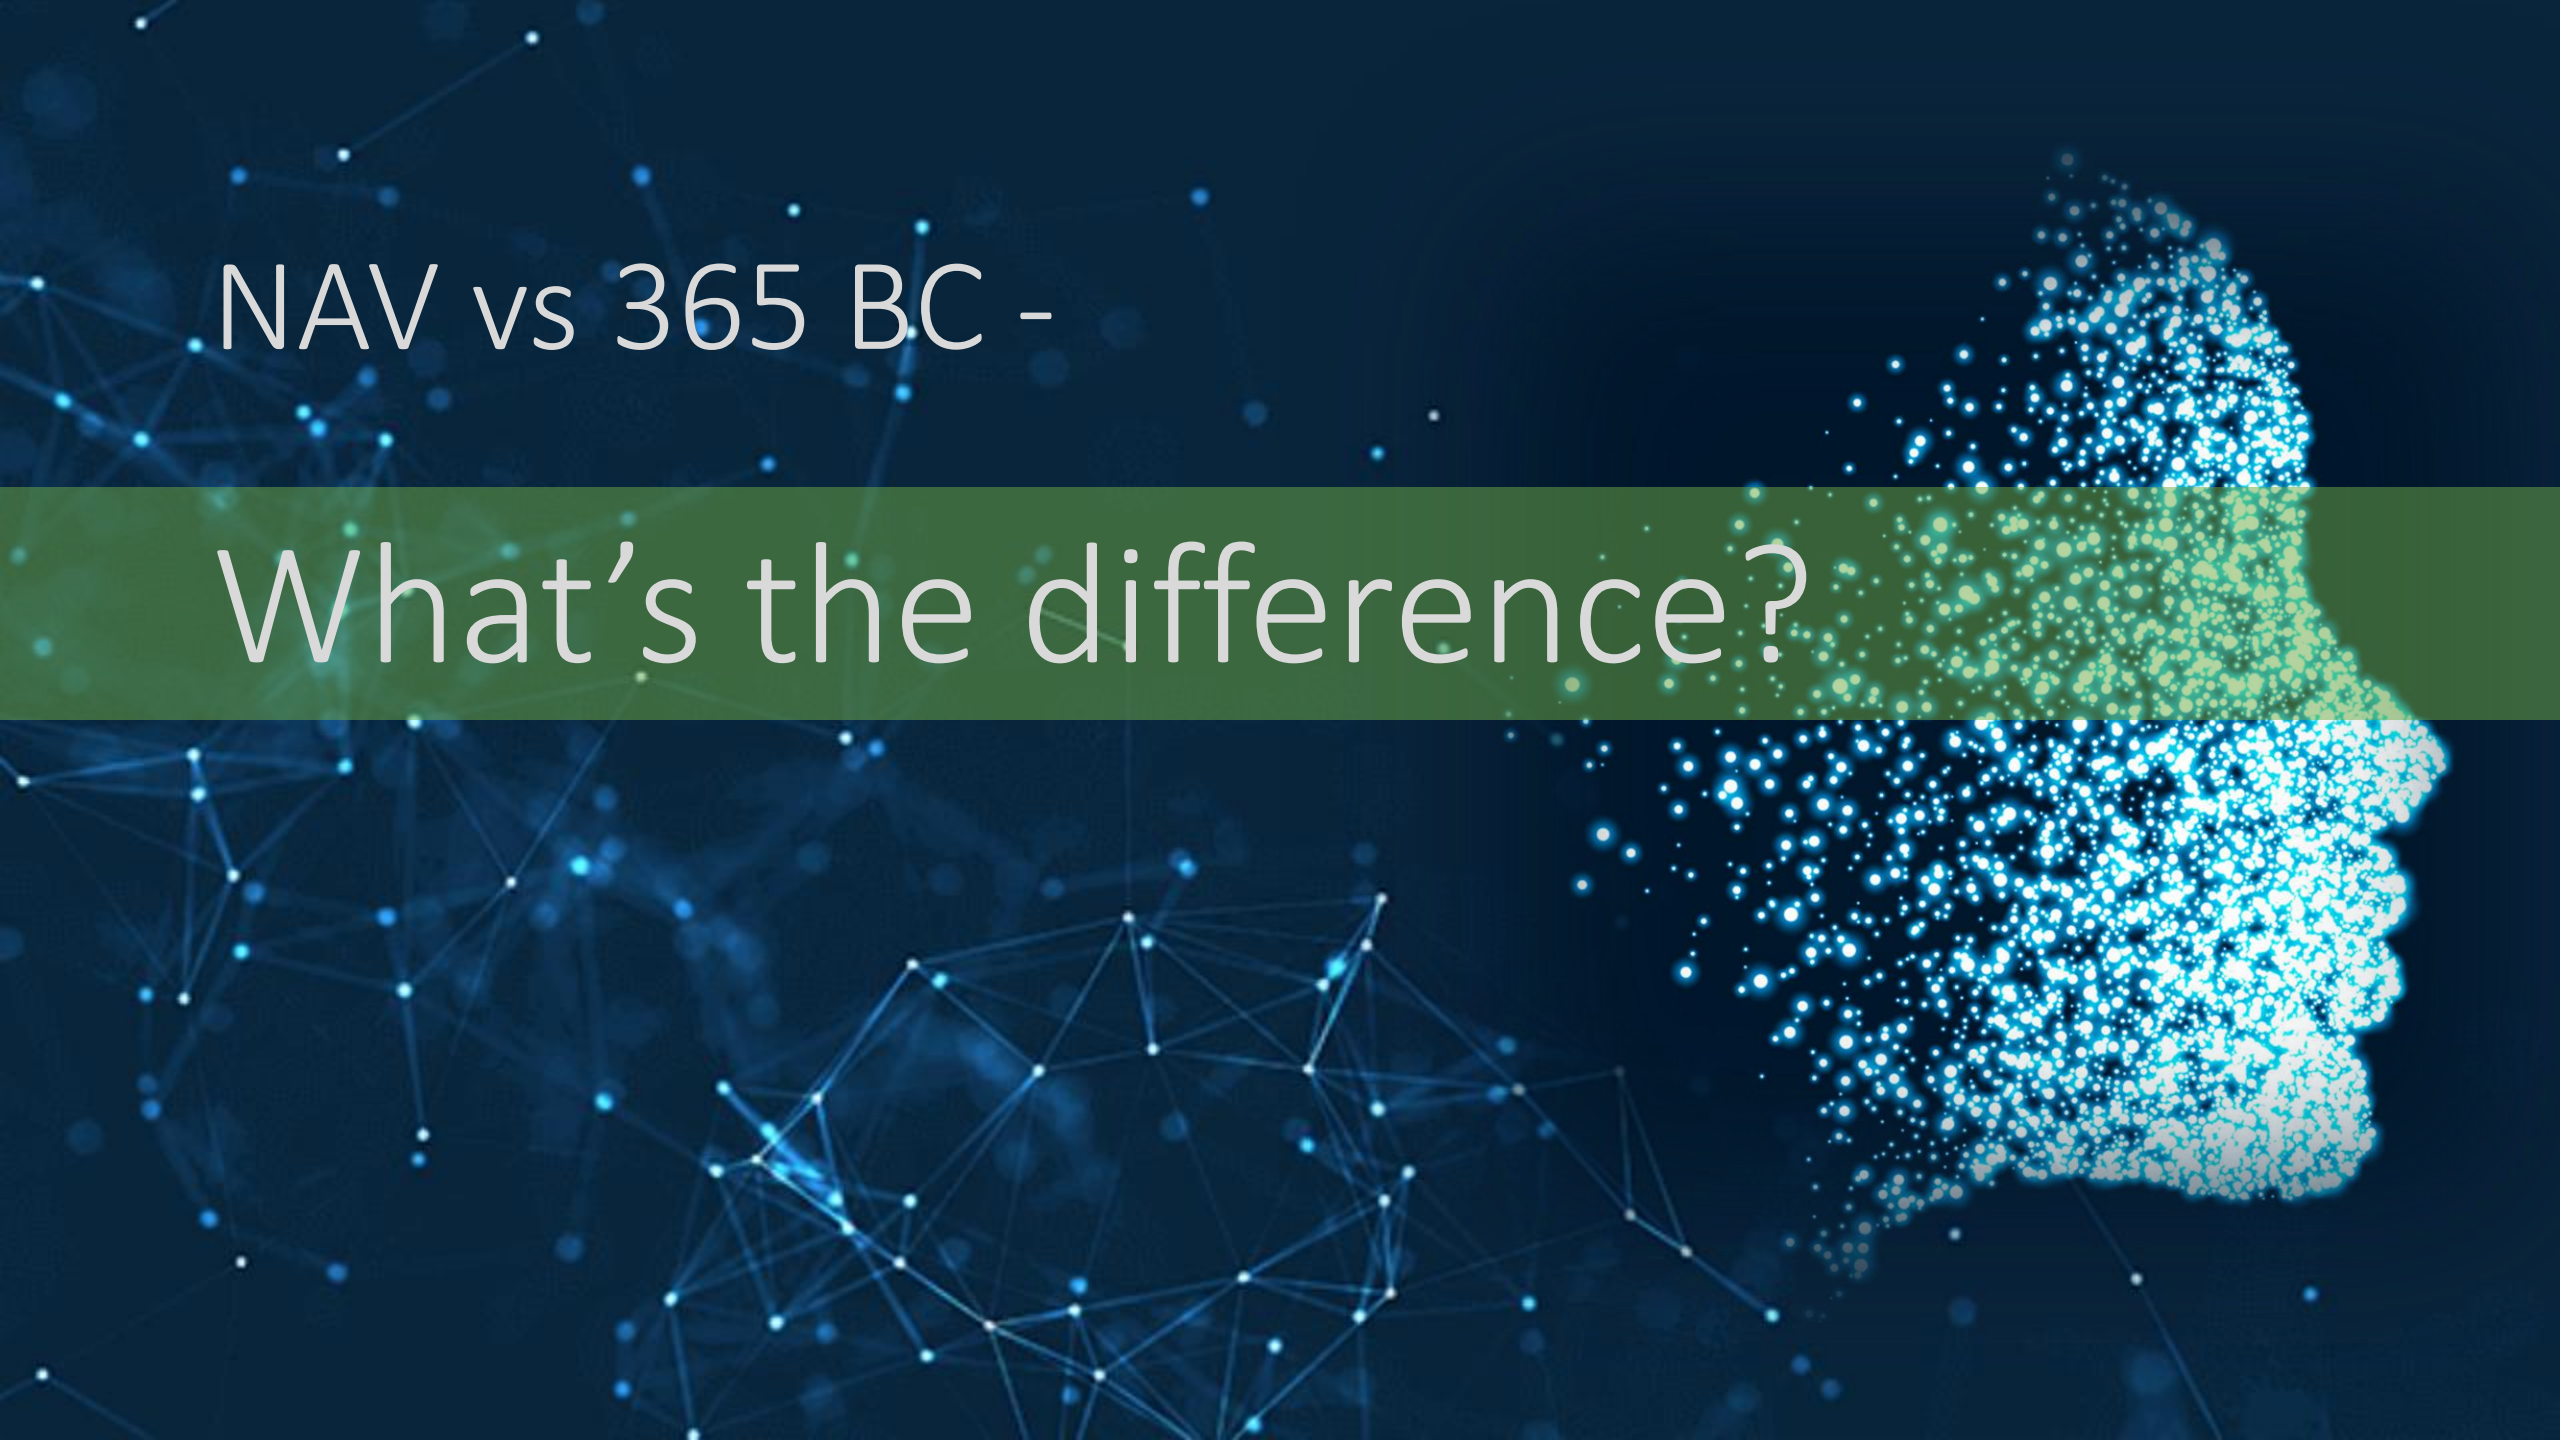
NAV vs 365 BC -

What’s the difference?



Firstly, it is important to understand that Dynamics NAV acts as the predecessor to Dynamics 365 BC.

NAV forms part of the ERP (enterprise resource planning) suite created by Microsoft to provide a complete solution in assisting enterprise managers to manage the workload, while increasing their performance. Dynamics NAV can only be operated on-site, and not in the cloud.

The difference between NAV and 365 BC is not in the solution of the product, but rather in the platform that each solution uses. Dynamics NAV is installed on local servers, and can only be implemented and operated directly on site. Whereas Dynamics 365 BC is hosted on the cloud. Dynamics 365 BC includes all the applications and functionality of Dynamics NAV, but is redesigned to work effortlessly and coherently on the cloud.

Business Central offers the ability to download and install applications and extensions (created by independent vendors from the Microsoft AppSource), allowing you to test, explore, keep or uninstall the extensions according to your needs. This option was not available for Dynamics NAV. 365 BC provides an integrated experience that can be accessed anywhere at any time, because it is hosted on the cloud. It allows for more efficient workflow, and provides the possibility to work remotely.

WHY TRANSITION TO THE CLOUD WITH YOUR ERP AND BUSINESS CENTRAL?

Numerous benefits can be found in the transition. The cloud offers the benefit of being cost-effective; the headache of dealing with physical infrastructures and the costs of updating the technology gets eliminated. Rather, a single system is implemented where all data and processes can be stored in the same place. This also removes the concern about faulty servers or the management associated with data backups. In removing the physical infrastructure, it becomes easier to manage and follow optimal growth in your company.

By removing the improvement and management of physical infrastructure, it becomes more seamless and efficient to have a system that follows and grows with the evolution of your company. When adjustments are required, you only need to give us a call, where we will guide and assist to change plans and improve the solutions to your needs.

With the ERP solution in the cloud, the advantage is offered to combine the best of what technology has to offer to create a secure, customizable and powerful solution.

Which is more trustworthy?

It is normal to be concerned regarding the safety and security features, especially when it comes to sensitive information in the cloud. Microsoft Dynamics 365 Business Central gives you access to one of the most secure clouds currently available. With the correct guidance, the cloud can in fact be an ally to double the security surrounding your data. Most clouds are equipped with strict regulations on security and data confidentiality, which satisfies the highest certifications and norms. Even when working under strict constraint, information can be saved to the cloud without fear or worry.

Besides being more cost-effective, Business Central offers security, peace of mind, efficiency and provides you with tools to follow your growth and evolution.
